

A NOTE REGARDING SILICONE SEALS

Advice on Silicone Seals:

Even though silicone seals are better in many way than regular latex seals they still must be handled with care.

Please handle them with care. Overstretching, sharp objects and poor trimming can cause your seal to tear.

Even if the silicone seals have more stretch than latex seals, do not stretch the seal more than required. Assist yourself with a free hand when pulling the seals over your head or hands – both for the seal and your comfort.

Avoid contact with sharp objects, like finger nails or rings, when handling seals.

Use a product such as talcum, on a regular basis to minimize frictional strain on the seal and for personal comfort.

When trimming seals, use sharp scissors. Cut edges should be as smooth and straight as possible. Do not trim across trim lines. Avoid sharp edges.
